# Stun Guns

Stun guns use high voltage and low amperage to temporarily disable an attacker for several minutes. The stun gun does not rely on pain for results. The energy stored in the gun is dumped into the attacker's muscles causing them to do a great deal of work rapidly. This rapid work cycle instantly depletes the attacker's blood sugar by converting it to lactic acid. In short, he is unable to produce energy for his muscles, and

his body is unable to function properly. The stun gun also interrupts the tiny neurological impulses that control and direct voluntary muscle movement. When the attacker's Neurological and Muscular system is overwhelmed and controlled by the stun gun, he loses his balance. Should the attacker be touching you, the current will *not* pass to your body!

The **TASER® Electronic Control Devices** are a non-lethal, self-defense alternative that is almost 100% effective. It combines the injury reducing benefits of traditional stun technology with a quantum leap in stopping power via new Electro-Muscular Disruption (EMD) technology. In police studies, **TASER®** electronic control devices have a higher instant incapacitation rate than a 9 mm hand gun.

These devices can stop a threat up to 15 feet away, allowing you a safe distance to protect yourself and your family from an attacker. If a close quarter defense is warranted, **TASER®** devices double as contact stun devices to repel someone as a powerful and unexpected backup capability.

The **TASER®** control devices use replaceable cartridges, containing compressed nitrogen, to deploy two small probes. Attached to the main unit by insulated conductive wires with a maximum length of 15 feet, 50,000 volts travels over the wires and overrides the central nervous system providing incredible take down power. The energy can penetrate up to two cumulative inches of clothing.

Cartridges for a **TASER®** devices each have a unique serial number and are equipped with an Anti-Felon Identification system, which discharges 20-30 serialized paper tags when deployed. Law enforcement can later retrieve this confetti from the scene and contact **TASER International** to get the name of the owner of the device, allowing police to track any potential misuse. Lifetime Replacement Guarantee.
